The present invention relates to novel G protein-coupled receptors

(nGPCRx; where x is 1, 3, 4, 5, 9, 11, 12, 14-18, 20, 21, 22, 24, 27, 28, 31-38, 40, 41, 53-60) and their coding sequences. The present sequence is the coding sequence of sequence for one such G protein-coupled receptor. GPCRs are also known as seven transmembrane receptors and function in signal cransduction. The nGPCRx coding sequences are useful for screening a human to diagnose a disorder affecting the brain or a genetic predisposition, specifically schizophrenia. NGPCRx are useful for predisposition, specifically schizophrenia. NGPCRx are useful for nGPCRx in a sample is useful as a diagnostic tool for diseases or disorders e.g. thyroid disorders HIV-1, metabolic and cardiovascular diseases, proliferative disorders and hormonal disorders. Modulators of nGPCRx activity have the utility for treating neurological disorders, including schizophrenia, ADHD/ADD (attention defici-hyperactivity disorder/attention deficit disorder), and neuronal disorders such as Alabiment's disease, prollide inflammatory conditions (e.g. Crohn's disease), rheumatoid arthritis, autoimmune disorders, cancers, respiratory aliments such as asthma, and inflammatory diseases e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New G protein-coupled receptor (nGPCR-x) and its encoding polynucleotide useful for diagnosing and treating e.g. schizophrenia.
neurological disorder; neuronal disorder; Alzheimer's disease; cancer; attention deficit hyperactivity disorder/attention deficit disorder; Parkinson's disease; migraine; senile dementia; inflammatory disease; rheumatoid arthritis; autoimmune disorder; respiratory ailment;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Vogeli G, Wood LS, Parodi LA, Hiebsch RR, Lind P, Slightom J;

This invention describes novel polypeptides which have anti-HIV, antiarteriosclerotic, cytostatic, neuroprotective, antiantamentory, virucide, hepatotropic, laxative, cerebroprotective, antiantlammatory, virucide, antibacterial, fungicide and protozoacide activity. The products of the invention are useful for treating a disease or condition associated with decreased expression or over expression of functional d-protein coupled receptors (GCREC), while antibodies generated against the polypeptide veceptors (GCREC), while antibodies generated against the polypeptide with the expression of GCREC e.g. arteriosclerosis, cirrhosis, cancer, stroke, Alzheimer's disease, Parkinson's disease, Crohn's disease, constipation, AIDS, or bacterial, viral, fungal or protozoal infections. The compounds described in the invention can be used for gene therapy. AAPR88580-AAF88627 encode the GCREC proteins represented by AAB71322-AAB71359, described in the disclosure of the invention
                                                                                           GCREC; Human, G-protein coupled receptor; anti-HIV; antiarteriosclerotic; cytostatic; neuroprotective; antiparkinsonian; hepatotropic; laxative; cerberoprotective; antihiflammatory; virucide; antibacterial; fungicide; protozoacide; cirrhosis; cancer; stroke; Alzheimer's disease; AIDS; Parkinson's disease; Crohn's disease; constipation; infection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Baughn MR, Tribouley CM, Nguyen DB, Thornton M, Yao MG;

This invention describes novel polypeptides which have anti-HIV, hepatotrotropic, cytostatic, neuroprotective, antiparkinsonian, hepatotropic, laxative, cerebroprotective, antiinflammatory, virucide, antibacterial, fungicide and protozoacide activity. The products of the invention are useful for treating a disease or condition associated with decreased expression or over expression of functional G-protein coupled receptors (GCREC), while antibodies generated against the polypeptide of with the expression of GCREC e.g. arteriosclerosis, cirrhosis, cancer, strok, Alzheimer's disease, arteriosclerosis, cirrhosis, cancer, stroke, Alzheimer's disease, barkinson's disease, Crohn's disease, constipation, AIDS, or bacterial, viral, fungal or protozoal infections. The compounds described in the invention can be used for gene therapy. AAPR98580-AAR98527 encode the GCREC proteins represented by AAB71322-AAB71369, described in the disclosure of the invention

```

This invention describes novel polypeptides which have anti-HIV, antiarteriosclerotic, cytostatic, neuroprotective, antiparkinsonian, hepatotropic, laxative, cerebroprotective, antiinflammatory, vinucide, antibacterial, fungicide and protozoacide activity. The products of the invention are useful for treating a disease or condition associated with decreased expression or over expression of functional G-protein coupled receptors (GCREC), while antibodies generated against the polypeptide of the invention are useful for diagnosing a condition or disease associated with the expression of GCREC e.g. arteriosclerosis, cirrhosis, cancer,

antiinflammatory, antiasthmatic, antirheumatic or antiarthritic. The GAVEI8 receptor and the DNA sequence encoding it may be a target for antisense therapy or gene therapy. The nucleic acid molecule, GAVEI8 proteins and antibodises may be useful in screening assays, detection assays (for example chromosomal mapping, tissue typing or forensic bloogy), or predictive medicine (for example diagnostic assays, monitoring clinical trials and pharmacogenomics. The prognostic assays, monitoring clinical trials and pharmacogenomics. The nucleic acid molecule, GAVEI8, anti-GAVEI8 antibodies, agonist, inverse agonist and antagonist are also useful for preventing and treating a GAVEI8, such as inflammation and immunological-related diseases or clisorders, for example asthma, chronic obstructive pulmonary disease or the GAVEI8 protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 540

The invention provides new G-protein coupled receptor (GPCR) polypeptides designated TGR2, TGR38, TGR18, TGR164, TGR343 and TGR388 and encoding polynucleotides. The polypeptides can be expressed by standard DNA recombination methodology. The polypeptides are useful for screening or identifying modulators of GPCR or signal transduction. The modulators of signal transduction are useful for treating or preventing TGR-associated disorders, e.g. asthma, multiple sclerosis or kidney disease. The polypeptides are useful as targets for diagnosing or treating e.g. epilepsy, stroke, neurodegeneration, hypogonadism, hyperprolactinemia, asymptomatic utinary abnormalities, hypertension, nephrolithiasis, cirkhosis, lesions, laundice, psoriaais, lupus erythematosus, or acute inflammantoses. The present sequence represents a human TGR343
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               360

The present invention provides the protein and coding sequences of several human G-protein coupled receptors (GPCRs). These can be used in the identification of candidate compounds as receptor agonists or inverse agonists having applicability as therapeutic agents. The present sequence is a GPCR coding sequence of the invention

The present invention provides the protein and coding sequences of a novel human testis-originated G protein-coupled receptor protein TGR10. The sequences can be used in the development of drugs for the treatment of diseases of the central nervous system, inflammations, diseases of the circulatory system, cancer, metabolic diseases, immunological diseases, and diseases of the gastrointestinal system. The present sequence is the coding sequence of the invention

This sequence encodes a human G-protein coupled receptor (GPCR), FFI-021. Expressed sequence tags of the PFI-021 sequence are mainly found in cDNA ilbraries from peripheral blood monouclear cells. Two ESTs have been identified in libraries derived from breast mRNA. PFI-021 and the corresponding cDNA are used to treat a patient needing altered activation rexpectation and a GPCR, such as inflammation, allergy and respiratory, neurology, psychology, urogenital disease, reproductive and sexual dysfunction/disorders, cancer, tissue repair, dermatology, skin pigmentation disorders, photoagaing, frailty, osteoporosis, metabolic disease, cardiovascular disease, gastro- intestinal disease, anti-infection, sensory organ disorders, sleep disorders and hair loss
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 3416, Application Us/09328352

Patent No. 6562958

APPLICANT: Gary L. Breton et al.

APPLICANT: Gary L. Breton et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER TITLE OF INVENTION: BAUVANNII FOR DIAGNOSTICS AND THERAPEUTICS

FILE REPERENCE: GTC99-03PA

CURRENT APPLICATION NUMBER: US/09/328,352

CURRENT PILING DATE: 1999-06-04

NUMBER OF SEQ ID NOS: 8252
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence contains 100 nucleotides from intron 16 (lower case letters), 140 nucleotides exon 16 (capital letters) and 24 nucleotides of intron 15 (lower case letters).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2.0%; Score 18; DB 4; Length 264;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                             US-10-055-106C-1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            57 AsnLeuValValValHisSerValPheLeuLeuThrValProPheArgLeuThrTyrLeu
                      Sequence 1302, Application US/09016434

Patent No. 650038

GENERAL INFORMATION:

APPLICANT: Jaffrey J. Seilhamer

TITLE OF INVENTION: COMPOSITION FOR THE DETECTION OF SIGNALING

TITLE OF INVENTION: PALHARY GENE EXPRESSION

NUMBER OF SEQUENCES: 1490

CORRESPONDENCE ADDRESS:

ADDRESSEE: INCYTE PHARMACEUTICALS, INC.

STREET: 314 PORTER DRIVE

STREET: GALIFORNIA

COUNTRY: USA
                                                                                                                                                                                                                                                                     MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/NS-DOS
SOFTWARE: Word Perfect 6.1 for Windows/MS-DOS 6.2

Sequence 750, Application US/09016434

Patent No. 650038

GENERAL INFORMATION:
APPLICANT: Jaffery J. Seilhamer
APPLICANT: Jeffery J. Seilhamer
TITLE OF INVENTION: COMPOSITION FOR THE DETECTION OF SIGNALING
TITLE OF INVENTION: PATHWAY GENE EXPRESSION
TITLE OF INVENTION: PATHWAY GENE EXPRESSION
CORRESPONDENCE ADDRESS:
ADDRESSEE: INCYTE PHARMACEUTICALS, INC.
STREET: 3174 PORTER DRIVE
CITY: PALO ALTO
STATE: CALIFORNIA
COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1084 AACTTCAAGGGTCTTTCCAAGGCATCCTATGCCTCAGGTGGAC 1131

        polyA+ RNA from equine peripheral blood leukocytes isolated from a healthy adult horse. The leukocytes were stimulated for 4 hr with 10 ng/ml E. coli 05:85 LDS. Double-stranded cDNA was cloned unidirectionally into different Drail sites of the pMERBS-FL3 vector (5-prime DrailI site is CACTOTOGT, 3-prime DrailI site is CACTOTOGT, 3-prime DrailI site is CACCATGTO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Homo sapiens (human)

Library constructed by Dr. Yutaka Suzuki and Dr. Sumio Sugano in

the Human Genome Center, University of Tokyo Institute of Medical

Science: tissue and RNA were prepared in the Department of Large

Animal Medicine, University of Georgia, sequenced as presented as their

reverse complement and have been trimmed to exclude vector and regions below

Phred quality 16. Three-prime sequences are presented as their

reverse complement and have been trimmed to exclude polyA.

Seq primer: Sugs (CTTCTGCTCTAAAAGCTGCG).
